well goes into groundwater.

Nutrient Cycle.

Biogeochemical cycles: Elements, chemical compounds, and other forms of matter are passed from one organism to another and from one part of the biosphere to another to another. They connect the biological, geological, and chemical aspects of the biosphere.

Energy is lost But Matter is recycled.

Producers: capture energy from the sun & use it to produce food.

Decomposers: break down nonliving, organic matter & return nutrients to the soil.
