Why ~~does~~ are decomposers essential for ecosystems to exist??

"Decomposers are essential for ecosystems because....."

We need decomposer because they get rid of the dead things they recycle things that's needed to be gone.

NOTES

habitable: possible for life to exist.

gravity: pull of objects towards earth

tidal lock: when two planets only see one face of each other because of their rotation.

learning log

I thought today's article taught me something that I never would have never thought about.
